

# Interim Report

**Team members:** Andrew Arakaki, Andrew Lemmex

**Github Repository:** Insect-adaptation

## Preliminary Visualizations:

**Changes:** Changing the PCA to finding if the increase in fitness is significant between the hot climate group and the other groups. Mainly due to the data already being low dimensional, but also because we had to cut out a lot of the data (~1500 down to ~160) in order to have high quality data without missing pieces.
